TestDisk is free data recovery software designed to help recover lost partitions and/or make non-booting disks bootable again when these symptoms are caused by faulty software, certain types of viruses or human error. It can also be used to repair some filesystem errors.

Information gathered during TestDisk use can be recorded for later review. If you choose to create the text file, testdisk.log, it will contain TestDisk options, technical information and various outputs; including any folder/file names TestDisk was used to find and list onscreen.

Use arrow keys to select, then press Enter key:

> Create] Create a new log file
[Append] Append information to log file
[No Log] Don't record anything

Note: Serial number 4C531001340531108274

Disk capacity must be correctly detected for a successful recovery.

If a disk listed above has an incorrect size, check HD jumper settings and BIOS
detection, and install the latest OS patches and disk drivers.

Please select the partition table type, press Enter when done.

[Intel] Intel/PC partition
[EFI GPT] EFI GPT partition map (Mac i386, some x86_64...)
[Hmmax] Hmmax partition table
[Mac] Apple partition map (legacy)

[Sun] Sun Solaris partition
[XBox] Xbox partition
[Return] Return to disk selection

Hint: Intel partition table type has been detected.

Note: Do NOT select 'None' for media with only a single partition. It's very rare for a disk to be 'Non-partitioned'.
